

August 30, 2005

Attention Nuclear Customers:

Tyco Electronics has revised its nuclear supplements to the quality manual (102-152). Revision "H" incorporates Appendix A (pages 6 -10), which documents Tyco Electronics' commitment to 10 CFR Part 21 requirements. There has been no major change to the organizational structure or the processing and control of the nuclear product line.

In an effort to improve the Controlled Quality Distribution process, we have placed our new manual on our website. You may review and download the current revision of our manual at www.tycoelectronics.com/quality and clicking on the appropriate icon. If you prefer a controlled hardcopy, please indicate your request on the attached memo.

If you want to continue to be listed on our Quality Manual Change Notification List, please sign the memo and return it at your earliest convenience. Upon receipt of the signed memo, your company shall be placed into controlled status, which will allow for future updates.

Regards,

Robert Villegas
Sr. Quality Systems and Nuclear Quality Engineer
